

Quick Start Guide-Pocket Bank

Download Android Pocket Bank [Here](#)

What is CloudCoin?

CloudCoin is a digital currency that cannot be counterfeited, double-spent, mined or lost. CloudCoin is 100% private and requires no public ledgers, accounts, or encryption.

This level of security is provided by the patent-pending RAID A (Redundant Array of Independent Detection Agents) technology. Twenty-five RAID A servers located in twenty-two countries around the world and are run by independent RAID A administrators.

The RAID A was designed as a global counterfeit detection system based on the DNS theory. The RAID A is utilized to detect and verify CloudCoins over many methods of implementation.

What denominations do CloudCoins come in?

CloudCoins use the following whole number denominations: 1s, 5s, 25s, 100s, 250s.

How many of each CloudCoin denomination are there?

- 250 CloudCoin Notes — 2,097,152 •
- 100 CloudCoin Notes — 8,388,608 •
- 25 Cloudcoin Notes — 2,097,152 •
- 5 CloudCoin Notes — 2,097,152 •
- 1 CloudCoin Notes — 2,097,152

This equals a total of 16,777,216 CloudCoin Notes, which converts to 1,428,160,512 CloudCoins.

What is Powning?

Powning is short for, "Password Owing" which is the process to take ownership of your CloudCoins. Anytime you import a CloudCoin into the powning software (Consumers Edition, Pro Edition, Pocket Bank, Etc.) the internal authentication numbers (passwords) of the CloudCoin are changed. This is done to ensure only one person can have ownership of the CloudCoin in addition to that; this process also checks each CloudCoin for authenticity.

DISCLAIMER:

You must have a connection with 16 out of the 25 RAID A servers to take ownership of your CloudCoins. Anything less than 16 may result in lost or counterfeit coins.

A detailed guide of how to do this process is available below.

Pocket Bank Step by Step Walkthrough, Download Pocket Bank [Here](#)

How To Pown CloudCoins into Pocket Bank

1. Download CloudCoin Pocket Bank app from the Google Play Store.
2. Download the CloudCoin that were sent to your email. They come as an attachment in an email and can also be imported from a Micro SD card inserted in your phone.
3. Open Pocket Bank and select, "Import," then choose, "Select File."
4. Choose the folder that holds your CloudCoins (usually the downloads' folder) and select the file you want to pown.
5. Your CloudCoins will be powned (Imported) into your Pocket Bank.

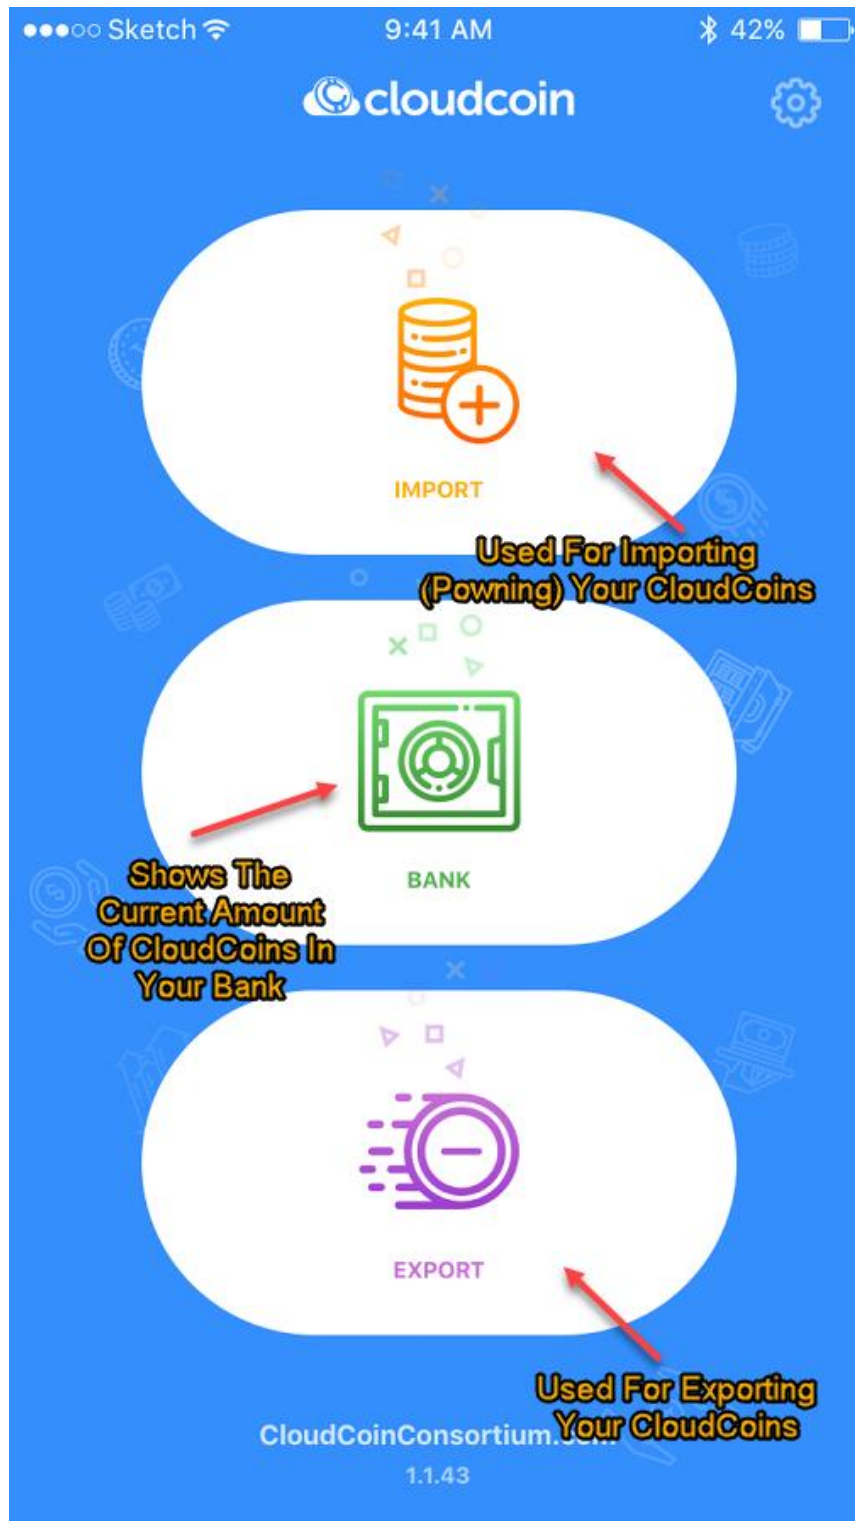

How To Export CloudCoins From Pocket Bank.

1. From the home screen of Pocket Bank, Select, "Export."
2. Choose how many CloudCoin notes you want to export, and in which, format (.jpeg or. stack).
3. Select, "Export."
4. Choose how you want to send the CloudCoins (Email, Skype, Android Beam, NFC., Etc.)

You may find it helpful to download a free file exploring app such as, [ES File Explorer](#), if the CloudCoin files are difficult to find.
